

## A. Elephant

time limit per test: 1 second  
 memory limit per test: 256 megabytes  
 input: standard input  
 output: standard output

An elephant decided to visit his friend. It turned out that the elephant's house is located at point 0 and his friend's house is located at point  $x$  ( $x > 0$ ) of the coordinate line. In one step the elephant can move 1, 2, 3, 4 or 5 positions forward. Determine, what is the minimum number of steps he need to make in order to get to his friend's house.

### Input

The first line of the input contains an integer  $x$  ( $1 \leq x \leq 1\,000\,000$ ) — The coordinate of the friend's house.

### Output

Print the minimum number of steps that elephant needs to make to get from point 0 to point  $x$ .

### Examples

<b>input</b>	<a href="#">Copy</a>
5	
<b>output</b>	<a href="#">Copy</a>
1	

  

<b>input</b>	<a href="#">Copy</a>
12	
<b>output</b>	<a href="#">Copy</a>
3	

### Note

In the first sample the elephant needs to make one step of length 5 to reach the point  $x$ .

In the second sample the elephant can get to point  $x$  if he moves by 3, 5 and 4. There are other ways to get the optimal answer but the elephant cannot reach  $x$  in less than three moves.

### Codeforces Round #340 (Div. 2)

### → Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
